The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and

The remainder overlaps either accession number AC000393 (WICGR project L174) or accession number AC000394 (WICGR project L177).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Basepairs from 15764 to 23536 are part of a region with a tendency to delete. These base pairs were determined entirely from direct sequencing of the clone and PCR products.

*working draft' sequence. It currently
*consists of 18 contigs. The true order of the pieces
*s is not known and their order in this sequence record is
*arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Deadman, R.

Direct Submission
Submitsed (13-NOV-1996) Sanger Centre, Hinxton, Cambridgeshire,
CB10 1RO, UK E-mail enquires: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk
IMPORTANT: This sequence is not the entire insert of clone 506G2.
It may be shorter because we only sequence overlapping sections
once, or longer because we arrange for a small overlap between
neighbouring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA PRI 23-NOV-1999
PAC 506G2 contains STSs and a CpG island.

*WOTE: This is a 'working draft' sequence. It currently

*Consists of 23 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* Inns of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

requests: clonerequest@sanger.ac.uk
on Sep 18, 1998 this sequence version replaced gi:3550203.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated human repeat sequence elements (e.g. Alu). Where the

This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X human chromosome X, constructed by the Sanger Centre Chromosome X happing Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX 931E15 is from the library RPC15 constructed at the Roswell Park Garcer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/ VECTOR: pCYPAC2 IMPORTANY: This sequence is not the entire insert of clone 931E15. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of 424/12 (282207) is at 3643 in this sequence. The true right end of 50662 (282213) is at 37431.
                                                           oŧ
sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            // 1700. .5497

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Direct Submission

L Submitted (31-JUL-1997) Chromosome 22 Project Group
(http://www.sanger.ac.uk/HGP/Chr22/) Sanger Centre, Hinxton,
Cambridgeshire, CBIO 15A, UK. E-mail enquires:
humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
on Aug 7, 1997 this sequence version replaced gi:1929050.
IMPORTANT: This sequence is not the entire insert of clone 398C22.
It may be shorter because we only sequence overlapping sections
once, or longer because we arrange for a small overlap between
neighbouring submissions.
This sequence was generated from part of bacterial clone contigs of
human chromosome 22, constructed by the Sanger Centre chromosome 22
mapping group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr22/

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            together with a note of the overlapping clone name. Note that the variations annotated may not be found in the sequence submission corresponding to the overlapping clone as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The true right end of clone 941F9 is at 104.
The true right end of clone 398C22 is at 89328.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   398Č22 is from the library RPCI3 constructed at the Roswell Park

Submitted (06-0CT-1999) Production Sequencing Facility, DOE Joint Submitted (06-0CT-1999) Production Sequencing Facility, DOE Joint Secone Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, 0SA * NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                              AC011336 96099 bp DNA HTG 06-0CT-1999

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-fich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will

* be preserved.

Numqueryesanger.ac.uk Clone requests: clonecrequest(sanger.ac.uk

On Mar 28, 1998 this sequence version replaced gi:257807.

IMPORTANT: This sequence is not the entire insert of clone 262012.
It may be shorter because we only sequence overlapping sections
once, or longer because we only sequence overlapping sections
once, or longer because we arrange for a small overlap between
neighbouring submissions.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
variations annotated may not be found in the sequence submission
corresponding to the overlapping clone as we submit sequences with
only a small overlap as described above.

This sequence was generated from part of bacterial clone contigs of
human chromosome 1, constructed by the Sanger centre chromosome 1
mapping group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chrl/
This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated human repeat sequence elements (e.g. Alu). Where the
sequence is ambiguous, there is an annotation using the 'unsure'
feature key.

265012 is from the library RPCII constructed at the Roswell Park
Cancer Institute by the group of Pieter de Jong.
For further details see http://bacpac.med.buffalo.edu/ The true
left end of clone 262012 is at 100895 in this sequence. The true right
end of clone 262012 is at 1 in this sequence.

1 contract the repeats of the resolve all in the repeated of the resolve the

On Aug 18, 1999 this sequence version replaced gi:5708178.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at the entire inser ac.uk/Projects/C_elegans/wormpep This sequence is the entire inser ac.uk/Projects/C_elegans/wormpep This sequence is the entire inser of clone 86377. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' faature key.

This sequence as generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 human chromosome 20, constructed by the Sanger centre Chromosome 20 human chromosome 20, constructed by the Sanger Centre Chromosome 20 human chromosome 20. constructed by the Sanger Centre Chromosome 20 human chromosome 20 constructed by the Sanger centre Chromosome 20 constructed by the Sanger Centre Chromosome 20 constructed by the Group of Pieter de Jong. AC010679_3 300001 350997
Continuation (3 of 4) of AC010679 from base 200001 (AC010679 Homo sapiens clone NH012
together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em.; EMBL; Sw.; SWISSPROT; Tr.; TREMBL
This sequence is the entire insert of clone 112K5. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX
112K5 is from the library RPCII constructed at the Roswell Park
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
* be preserved.

All repeats were identified using RepeatMasker: Smit, A.F.A. &

Green, P. (1996-1997)

Http://ftp.genome.washington.edu/RM/RepeatMasker.html.

* NOTE: This record contains 153 individual

* Sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota: Metazoa; Chordata; Craniata; Vertebrata; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
